ACADEMIC PROFILE

B.Sc. Post Graduate in Applied Informatics (Computer Science) from the University of Macedonia (UoM), specializing in Machine Learning, Neural Networks, Computer Vision, and Applied Mathematics. Experienced in end-to-end deep learning pipelines, hyper-parameter optimization (HPO), real-time data engineering, and quantitative time-series analysis (Monte Carlo simulations, statistical risk modeling). Developer of modular open-source ML/data Frameworks/Libraries & Research Frameworks in Python. Currently seeking an M.Sc. in Machine Learning/Computer Vision, with the long-term goal of pursuing Ph.D. research in Computer Vision and 3D Neural Scene Reconstruction. Passionate and big advocate of open-source software and open science in machine learning, committed to developing & contributing to reproducible ML research/Papers, open-source frameworks & libraries

EDUCATION

B.Sc. in Applied Informatics - Information Systems 2026

University of Macedonia | *Thessaloniki, Greece*

- Thesis: "Mining Intelligence: Towards Decentralized, Permissionless AI." (Grade: 10/10). Trained an AI text detector model to detect AI-written text.
- Developed knowledge and performed extensive research in Machine Learning, Neural Networks, Mathematics, Computer Vision, Economics & Distributed Systems.

Certificate of Proficiency in English (C2) 2017

University of Michigan

- Acquired proficiency in English Language & Literature by the age of 14.

State Certificate of Language Proficiency in German (B2) 2018

KPG (Greek State Certificate)

- Acquired extensive knowledge & expertise in German Language & Literature by the age of 15.

RESEARCH-PROJECTS

Mining Intelligence: Towards Decentralized, Permissionless AI 2026

University of Macedonia | *Thessaloniki, Greece*

(Grade: 10/10)

- Trained AI text Detector model to detect AI written text using traditional ML & NLP Models/Techniques representing them in latent space & using LLM embeddings to perfrom Classification and Visualizing the results. HPO Methods like Random and Bayesian Optimization were used to discover the optimum Hyperparameter Space with Statistical Techniques to verify them.
- Studied & Researched the Bittensor Architecture and the relationship between the possible future of Decentralized, Permissionless Intelligence, incentives, and capital. **https://github.com/MwkosP/Mining-Intelligence**

Deepfake Detection using Convolutional Neural Networks and Transfer Learning 2025

University of Macedonia | *Thessaloniki, Greece*

(Binary Image Classification)

- Performed **https://github.com/MwkosP/Face-Classification-with-Neural-Networks**, using the Dataset 140k Real and Fake Faces to train Custom & Pre-trained CNN models like ResNet50, VGG16, and InceptionV3 with Transfer Learning Techniques like Fine-tuning, Feature Extraction, to classify the Faces into Real and Fake. Data Augmentation Methods like Picture Cropping, Rotation, Scaling, and Color Jittering were utilized to augment the dataset. HPO methods ensured the optimum Hyperparameters while verifying the results with Statistical Techniques like Accuracy, Precision, Recall, F1-Score, and ROC-AUC Curve to evaluate the models.

Mathematical and Machine Learning Modelling on Timeseries 2025

University of Macedonia | *Thessaloniki, Greece*

(Supervised Regression)

- Performed **https://github.com/MwkosP/Bitcoin-Mathematical-ML-Modelling** time-series forecasting & Regression using Mainly Mathematical and Machine-learning Techniques and Models like LSTM, Random Forest, SVM, and Line-Curve fitting with Statistical Loss Functions to minimzie the error between the predicted and the actual values. and mathematical models.

AbstractML 2025

Personal Project | *Thessaloniki, Greece*

(Python Library for Machine Learning)

- Developed **https://github.com/MwkosP/AbstarctML** a Python library for abstracting machine learning Functions, Models, Techniques, & Pipelines for ease of use. It provides a simple interface/API for training, evaluating, and deploying models with ease. Under the hood, it uses Numpy, Pandas, Scikit-learn, Pytorch,etc...

Hyper-TA 2025

Personal Project | *Thessaloniki, Greece*

(Hyperparameter Optimization Framework for Quantitative Time-Series Analysis)

- Coded & Developed **https://github.com/MwkosP/Hyper-TA**, a Python library for Hyperparameter Optimization for Quantitative Time-Series Analysis. It is one of the few projects in the Github Open source community for HPO in Time sereis and Technical Analysis to produce and discover the best hyperparameters over specified Metrics(PnL, Risk, Sharpe Ratio, etc...) using Statistical Techniques to properly Backtest(Monte Carlo, Walk Forward Analysis, Distributions). It Provides The simplest API in the Open Source Library Space and future works will provide GPU accelerated Backtesting & Analysis with CUDA/Shaders support.

Finpipe 2025

Personal Project | *Thessaloniki, Greece*

(API/Websocket Data Cleaner & Aggregator API for Financial Data)

- Architected & Developed **https://github.com/MwkosP/Finpipe**, a Python library for Financial Pipeline Management and Automation. It is an Open Source Library in Github & Pypi for everyone to use. It provides a simple interface/API for fetching, cleaning, transforming, financial data. It works as Free API/Websocket Data Aggregator Pipeline for end users to fetch Freely available Data from multiple sources and sectors that are unfiltered and difficult to use.

OrderbookViz 2025

Personal Project | *Thessaloniki, Greece*

(Orderbook Visualization and Analysis Framework)

- Developing **https://github.com/MwkosP/OrderbookViz**, a Python Framework for Orderbook Visualization and Analysis. Shaders like OpenGL or Vulkan are going to be utilized to Dynamically and Efficiently visualize the Orderbook Data that needs GPU acceleration to render in real time with the Micro Second adjustments in the feed.

Github 2025

Personal Projects | *Thessaloniki, Greece*

(Multipel Projects in Github)

- Multiple other projects in **https://github.com/MwkosP** exist like Websites, APIs, Libraries, Frameworks, Games(Wordle game Built from scratch), Tools, Utilities and many more.

EXPERIENCE

Technical Support Analyst 2025–2026

Telekom | *Thessaloniki, Greece*

- Trained on Networking, Router Systems Diagnostics, Telekom's Applications and Networks Provided Technical Support to Telekom's Customers and Resolved their Issues

Data Analysis and Website Development 2025

Kemanetzidis A.E. | *Remote*

- Analyzed Business's data, formated and pre-processed it using Python and SQL and reported Results
- Developed a responsive full-stack website (mainly Backedn and a Simple UI) supporting business and client-facing services using HTML, CSS, JavaScript, NextJS, TailwindCSS and Python

Freelance Data Science, Machine Learning, Backend & Web Development 2023–2026

Independent | *Thessaloniki, Greece*

- Developed machine-learning and deep-learning projects, including CNN-based image-classification systems
- Built data-analysis workflows and web applications for academic and commercial use using Python(Numpy, Pandas, Scikit-learn, Pytorch, Optuna and many more Libraries), SQL(PostgreSQL), HTML, CSS, JavaScript, NextJS, TailwindCSS and React Provided Similar Services to Clients and Projects like Data Analysis, Machine Learning, Backend & Web Development

ACADEMIC SERVICE

FOSSCOM 2025

University technology event | *Thessaloniki, Greece*

- Volunteer supporting an open-source software community event

University Activities & General Open Source Contributions

- Participated in university events and committees
- Contributed through public repositories, code contributions, and technical forums

TECHNCIAL SKILLS

Programming	Machine Learning, Backend Development, Data Analysis, Web Development, Shaders(GPU Programming)
ML & Data	NumPy, Pandas, Scikit-learn, PyTorch, Optuna, Matplotlib, Plotly
Backend & Data	FastAPI, PostgreSQL, REST APIs, Web-Sockets, TA-Lib, finta, yfinance
Web	HTML, CSS, JavaScript, Next.js, Tailwind CSS
Tools	Git, GitHub, Jupyter, Linux, VSCode, ffmpeg
Languages	Greek (native), English (C2), German (B2)
